BACKGROUND VERIFICATION CRM

Cost and Feasibility

What Ontriq pays each month to run the system, line by line, and why it pays for itself.

MONTHLY AT 200 CASES	AI PER COMPREHENSIVE CASE	HOSTING AND DATABASE
$116	**$0.27**	**$45**
LKR 38,693 · everything but maintenance	LKR 89 · 7 checks	a month, at any volume

Prepared for
Ontriq (Pvt) Ltd

Version
1.3 · 31 October 2026

Currency
USD (LKR at 335)

Every figure is calculated from the stated assumptions and public list prices checked on 31 October 2026. AI usage comes from test runs on the real models. The system records actual spend from the first case, so these estimates can be checked at any time.

1 · SUMMARY

The short answer

Running the system costs about $59 a month at 50 cases and $211 at 600. That covers AI, hosting, database, email and SMS. The maintenance plan is quoted separately.

50 CASES A MONTH	200 CASES A MONTH	600 CASES A MONTH
$59	**$116**	**$211**
LKR 19,656	LKR 38,693	LKR 70,682

Key findings

- AI costs about $0.27 (LKR 89) for a seven-check case and $0.13 for a standard one when files arrive separately. A case sent as one combined PDF costs about $0.50, because each check reads the whole file.
- Real test cases came in below these plans. Six separate files cost $0.10 from upload to report, with one check taken through outreach. One four-page PDF cost $0.15 to read into all seven checks. Five files from a candidate cost $0.08 to read and write up.
- Hosting and the database are a fixed $45 a month. There are no per-user fees, so staff and client logins can grow freely.
- Each comprehensive case saves roughly 3.0 hours of staff work, worth about LKR 2,685, against LKR 89 of AI: about 30 times the cost.

What changed since version 1.0

	VERSION 1.0	VERSION 1.3
AI per comprehensive case	$0.65	$0.27
AI per standard case	$0.35	$0.13
Monthly at 50 cases	$80	$59
Monthly at 200 cases	$164	$116
Monthly at 600 cases	$395	$211
Exchange rate, LKR to the dollar	300	335

Version 1.0 was an estimate made before the AI was built. Every feature has since been run on the real models, and routine work moved to a cheaper model wherever its results held up.

Verdict: feasible

The running cost is a small fraction of the value of each verification. Every AI step is recorded and capped by budget, and a person confirms every result.

2 · MONTHLY COST

What Ontriq pays each month

Ontriq's monthly volume isn't confirmed yet, so three volumes are shown. Each assumes 40% comprehensive cases, the rest standard, and 30% of cases arriving as one combined PDF.

PER MONTH	PAID TO	STARTER	GROWTH	SCALE
Cases a month		50	200	600
AI: reading and reviewing cases	Anthropic	$10.82	$43.29	$130
AI: quotations and payment slips	Anthropic	$0.071	$0.21	$0.47
AI: assistants and briefings	Anthropic	$2.29	$5.11	$10.09
Hosting (Netlify Pro)	Netlify	$20.00	$20.00	$20.00
Database, files, backups (Supabase Pro)	Supabase	$25.00	$25.00	$25.00
Email (Resend)	Resend	Free plan	$20.00	$20.00
SMS to candidates	SMS gateway	$0.45	$1.80	$5.40
Voice transcription	OpenAI	$0.045	$0.090	$0.15
Total (USD)		**$59**	**$116**	**$211**

IN RUPEES			
Total per month	LKR 19,656	LKR 38,693	LKR 70,682
AI per case on average	LKR 73	LKR 73	LKR 73

Work out any month

$45 for hosting and the database, plus about $0.23 a case for AI and SMS, plus a few dollars for the assistants. Add $20 for email above about 113 cases a month.

Not in these totals

- The maintenance plan, quoted separately. If it includes the Netlify hosting, take $20 off each total.
- Tax and bank charges on foreign-currency payments.
- Extra Netlify credits, if a busy month uses up the 3,000 included: $10 for 1,500 more. We expect the allowance to cover these volumes, but it can only be measured once the site is live.
- A larger database server, if 600 cases a month slows the included one. The next size up adds about $5 a month.

3 · HOW THE AI IS USED

The cheapest model that does each job well

AI usage is billed by the amount of text and images it reads (input) and writes (output), measured in tokens. A photographed page is up to about 4,800 tokens. Each task runs on the most economical model that does it reliably.

MODEL	PRICE PER MILLION TOKENS (IN / OUT)	USED FOR
Claude Haiku 5.5	$0.10 / $0.50	Light, high-volume work: reading uploads, payment slips, consistency checks, Pre-QC drafts, outreach and briefings.
Claude Sonnet 5.5	$2.00 / $10.00	Where accuracy matters most: check fields, the candidate report, the Post-QC cross-check, reading replies, report remarks, quotations, the staff assistant.
Claude Opus 5.5	$4.00 / $20.00	The Super Admin command assistant.

How the models were chosen

- The case features were scored on the real models against known right answers, and each moved to the cheapest model that held its score.
- Haiku, the lowest-cost model, reads every upload and handles the consistency check, Pre-QC, outreach drafts and briefings.
- Sonnet stays where a wrong word could reach a client or a result: check fields, the candidate report, the Post-QC cross-check, verifiers' replies, report remarks and quotations.
- Opus runs only the Super Admin's command assistant, which is low in volume and has the widest reach.
- Fixed instructions are cached, so repeat reads cost a tenth of the normal price or less.
- Voice notes for the command assistant are transcribed at about $0.003 a minute before the assistant reads them.

People stay in control

The AI proposes and staff confirm. It never sets a price, a verification result or an assignee on its own, and it never marks a document as received.

4 · COST PER TASK

What each AI step costs

Token counts come from the test runs of 31 October 2026, rounded up where real cases ran higher. Quality feedback to candidates and signs of editing come from the first read, so they have no cost of their own.

TASK	MODEL	UNIT	COST
Read one page: type, quality, text, translation, signs of editing	Haiku 5.5	page	$0.0008
Fill the fields for one check	Sonnet 5.5	check	$0.017
Write the candidate report once they confirm	Sonnet 5.5	case	$0.038
Compare everything across documents	Haiku 5.5	case	$0.002
Pre-QC checklist and drafted requests	Haiku 5.5	case	$0.001
Draft the verification email and call script	Haiku 5.5	check	$0.0004
Turn a verifier's reply into a proposed result	Sonnet 5.5	check	$0.009
Post-QC cross-check and proposed outcome	Sonnet 5.5	case	$0.018
Report remarks and summary	Sonnet 5.5	case	$0.013
Draft a quotation	Sonnet 5.5	draft	$0.006
Read a payment slip	Haiku 5.5	slip	$0.0003
Draft a nudge to a staff member	Haiku 5.5	nudge	$0.0001
Staff assistant question	Sonnet 5.5	question	$0.005
Super Admin command	Opus 5.5	command	$0.012
Daily manager briefing	Haiku 5.5	day	$0.0001
Transcribe a voice note	Speech-to-text	minute	$0.003
SLA monitoring, auto-assignment rules, performance tracking	No AI	—	$0

The two assistants are planned at about twice their test cost, because real conversations run longer than single questions.

5 · COST PER CASE

One case, start to finish

From the first upload to the drafted report, with every check taken through outreach and a reply.

Comprehensive (7 checks)

Education, employment, address, police clearance, NIC, references and global sanctions; about 12 pages of documents, sent as separate files.

STEP	QTY	MODEL	COST
Read one page: type, quality, text, translation, signs of editing	12	Haiku 5.5	$0.010
Fill the fields for one check	7	Sonnet 5.5	$0.12
Write the candidate report once they confirm	1	Sonnet 5.5	$0.038
Compare everything across documents	1	Haiku 5.5	$0.002
Pre-QC checklist and drafted requests	1	Haiku 5.5	$0.001
Draft the verification email and call script	7	Haiku 5.5	$0.003
Turn a verifier's reply into a proposed result	7	Sonnet 5.5	$0.066
Post-QC cross-check and proposed outcome	1	Sonnet 5.5	$0.018
Report remarks and summary	1	Sonnet 5.5	$0.013
Total per case			**$0.27 · LKR 89**

What real test cases cost

Test cases ran through real uploads, the job worker and the cost ledger, using invented documents. They came in below the plan above.

TEST CASE	AI CALLS	COST
Six separate files, to the report stage, one check through outreach	17	$0.10 to $0.11
One four-page PDF, read into all seven checks	8	$0.15 to $0.16
Five files from a candidate, read in and written up as a candidate report	11	$0.08

Standard (NIC, education, employment)

About 6 pages of documents, sent as separate files.

STEP	QTY	MODEL	COST
Read one page: type, quality, text, translation, signs of editing	6	Haiku 5.5	$0.005
Fill the fields for one check	3	Sonnet 5.5	$0.050
Write the candidate report once they confirm	1	Sonnet 5.5	$0.022
Compare everything across documents	1	Haiku 5.5	$0.001
Pre-QC checklist and drafted requests	1	Haiku 5.5	$0.001
Draft the verification email and call script	3	Haiku 5.5	$0.001
Turn a verifier's reply into a proposed result	3	Sonnet 5.5	$0.028
Post-QC cross-check and proposed outcome	1	Sonnet 5.5	$0.009
Report remarks and summary	1	Sonnet 5.5	$0.007
Total per case			**$0.13 · LKR 42**

When a case arrives as one combined PDF

Separate files are read once and reused as text. A combined PDF is read in full by every check, so it costs more. The monthly totals allow for this.

HOW THE CASE ARRIVES	COMPREHENSIVE (7 CHECKS)	STANDARD
Separate files	$0.27	$0.13
One combined PDF	$0.50	$0.16

6 · CLIENTS, QUOTATIONS AND INVOICES

Onboarding a client and billing

Creating the client, its portal login and its packages uses no AI. The AI drafts the quotation's wording; prices always come from the price list.

STEP	QTY	MODEL	COST
Draft the quotation (first draft and two regenerations)	3	Sonnet 5.5	$0.018
Onboarding a client			**$0.018**

PER INVOICE	MODEL	COST
Read the payment slip	Haiku	$0.0003
Per invoice		**$0.0003**

Assistants

- Staff assistant, which answers questions about the work each person can see: about $0.005 per question.
- Super Admin command assistant, with reach across the whole system by voice or text: about $0.012 per command, plus $0.003 per minute of voice.
- Daily manager briefing: about $0.0001 a day.

7 · HOSTING AND SERVICES

Where the system runs

Managed services run the system, so Ontriq needs no servers of its own.

Netlify: the application, on a maintenance plan

The application and its background workers run on Netlify. Netlify's free plan is too small for a business system, so the system runs on Netlify Pro at $20 a month: 3,000 credits a month for the team, with unlimited members; extra credits can top up automatically so the site is never paused.

> **Maintenance plan**
>
> Hosting is provided under a monthly maintenance plan, quoted separately. The plan covers the Netlify hosting, monitoring, security and dependency updates, backup checks and support.

Supabase: database, sign-in and document storage

PLAN	MONTHLY	WHAT YOU GET
Supabase Free	$0	500 MB database, 1 GB file storage, pauses after a week without activity, no backups
Supabase Pro	$25	8 GB database, 100 GB file storage, daily backups kept for 7 days, never pauses; includes a $10 compute credit

Every total in this document uses Pro from go-live, because the system holds candidates' personal documents and needs daily backups. Each case stores about 8 MB of documents and reports. At 200 cases a month, Pro's 100 GB lasts about 5 years, and more costs $0.0213 a GB. Records past their retention period are erased, which frees space.

Email, SMS and transcription

- Email through Resend: free for up to 3,000 emails a month, but limited to 100 a day. Busy days would pass that from about 113 cases a month, so the totals move to the $20 plan there.
- SMS reminders through Notify.lk or a similar gateway, paid per message: LKR 0.64 to 0.84 a message on Text.lk's published rates; the totals allow about LKR 1.00, because Sinhala and Tamil messages can use more than one unit.
- Voice transcription for the command assistant: about $0.003 a minute, on an OpenAI account.
- Domain: the system runs on a sub-domain of Ontriq's existing domain (for example crm.ontriq.lk) at no extra cost.

8 · FEASIBILITY

What the AI saves on every case

Minutes of staff time on a comprehensive case, before and after the AI takes on the reading, drafting and chasing. Staff still review and confirm every step.

ACTIVITY	BEFORE (MIN)	WITH AI (MIN)	SAVED
Data entry from documents	15	4	11
Pre-QC document review	20	8	12
Drafting verification outreach (7 checks)	70	14	56
Recording responses and results (7 checks)	56	21	35
Writing the report findings	45	10	35
Chasing candidates for documents	20	2	18
Status calls and emails from clients	15	3	12
Per comprehensive case	**241**	**62**	**179 min**

STAFF TIME SAVED

3.0 h

per comprehensive case

VALUE OF THAT TIME

LKR 2,685

at LKR 900 an hour

AI COST

LKR 89

30× return

Beyond the hours

- Faster turnaround: candidates upload through a guided link with instant feedback, and outreach is drafted in seconds for a person to send.
- Fewer QC returns: documents are checked for readability on upload, and for consistency before Pre-QC.
- Fewer missed discrepancies: the Post-QC cross-check reads every check against its evidence.
- A head start on every case: when a candidate confirms, staff get a report of what was provided, with each fact tied to its file.
- Fewer status calls: clients see each check's progress in their portal.

The staff cost per hour and the minutes saved are planning assumptions; replace them with Ontriq's own figures to restate the return.

9 · COST CONTROLS

Spend that can't run away

- Every AI call is recorded with its model, tokens and cost, and tied to the case and feature that caused it.
- Settings and Analytics show spend by day, feature and model, and the cost per released case.
- Budgets alert or pause when reached. The starting limits are an alert at $25 a day or $400 a month in total, with lower caps that pause document reading, field filling and the command assistant.
- Each AI feature can be switched off, or moved to a cheaper model, without a code change.
- If the AI is off or unavailable, the system keeps working and staff enter details by hand.
- A background job that fails repeatedly is stopped rather than retried forever, so a fault can never loop on paid calls.

10 · ASSUMPTIONS AND SOURCES

How these numbers were made

- List prices checked on 31 October 2026. OpenAI's page could not be opened that day, so its transcription price is from 29 October and independent listings.
- USD 1 = LKR 335: the market rate was about 331 in mid-October 2026, plus a small cushion. Tax and bank charges are not included.
- AI figures come from test runs on invented documents and cases in English, Sinhala and Tamil. Real documents may use more tokens, and the system records the real cost from the first case.
- A comprehensive case has about 12 pages and a standard case about 6. 40% of cases are comprehensive and 30% arrive as one combined PDF. 8 MB of files per case.
- Per month: 50 cases with 3 new clients, 200 assistant questions, 100 commands and 15 voice minutes; 200 cases with 8 new clients, 500 assistant questions, 200 commands and 30 voice minutes; 600 cases with 15 new clients, 1,200 assistant questions, 300 commands and 50 voice minutes. 8 emails and 3 SMS per case.
- Usage figures for assistants and briefings are estimates. They are the easiest line to control with budgets.
- Prices change. This document is regenerated from the same model when they do.
